Interior Collection

This brochure showcases a selection of architectural interior wood products manufactured by Vindor OÜ - part of Combiwood Group.

Each product is made from carefully selected, locally sourced pine - slow-grown, stable and full of character. Our focus lies in durable materials, thoughtful design and timeless Nordic simplicity.

It's not just about wood, it's about what it makes possible.

**Better spaces.
Smarter choices.**

A close-up photograph of a person's hands using a digital depth gauge to measure a piece of light-colored wood. The gauge has a black frame and a digital display showing '10.00'. The wood is part of a larger assembly, possibly a door or window frame, with other wooden components visible in the background. The lighting is warm and focused on the measurement process.

From the forest
to finished product

Everything happens within one group, from raw timber to interior solutions

At Combiwood Group, we bring together a network of woodworking companies under one roof. From responsible wood sourcing and sawmilling to component manufacturing and interior solutions, we ensure quality, traceability and efficiency throughout the entire process.

10 factories

based in Estonia

20+ years

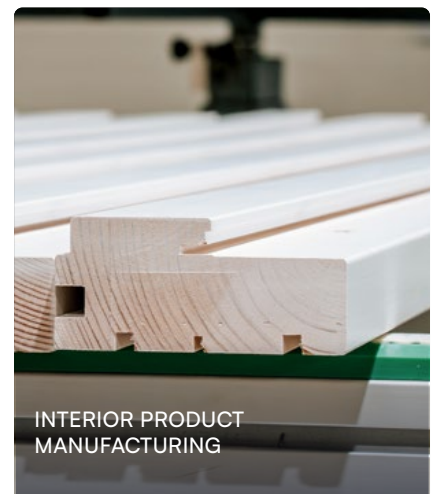

of experience in the field

Vertically integrated

Our operations span the full wood value chain. By working as an unified system and sharing expertise across companies, we achieve results that meet the demands of clients across the globe.

Built on trust and flexibility

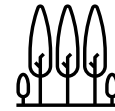

We believe in lasting partnerships and a flexible way of working, allowing us to deliver tailored, high-quality results that bring ideas to life.

We know where our wood comes from

All the raw material we use, is sourced and processed within our own group. This allows us to ensure traceability, quality and sustainability across every step of the manufacturing process.

Our timber is FSC® and PEFC certified, meaning it originates from responsibly managed forests that meet strict environmental, social and economic standards. We primarily work with local pine, minimize production waste and maintain durability standards.

90% of the wood we use in our production is locally sourced pine

Certifications / Trusted labels

Programme for the Endorsement of Forest Certification

PEFC certification guarantees that wood is sourced from sustainably managed forests. It supports small forest owners and promotes transparent, responsible forest management.

Forest Stewardship Council®

The FSC® certification confirms that our wood comes from responsibly managed forests. It ensures environmental protection, social responsibility and sustainable economic practices throughout the supply chain.

Environmental Product Declaration

The EPD certificate confirms that our products have undergone a verified life cycle assessment. It provides transparent data on environmental impact, helping clients make responsible and sustainable choices.

SP Certificate

The SP Certificate, issued by RISE (Research Institutes of Sweden), confirms that our products meet high Nordic standards for performance, safety and durability. It reflects compliance with rigorous testing and quality assurance procedures, particularly in construction and building materials.

Zero Waste

As a group, we are committed to using every part of the log. Our production is designed for maximum efficiency and minimum waste: the bark is used for mulch and to heat our facilities, while the sawing process produces both quality timber and by-products like chips and sawdust, which go to the paper and pellet industries. Every part of the log becomes a product - nothing is left unused.

Tailored Wooden Profiles

DIY and industrial solutions

Our profiled and primed components are designed for manufacturers and professional builders seeking high-quality materials.

Components are delivered pre-machined and finished to reduce processing time and ensure consistency throughout the supply chain.

Available in solid and finger-jointed softwood, as well as moisture-resistant or standard MDF, these components are suited for further finishing or direct installation — depending on project needs.

Components / profiled or primed

Custom wood components are available in multiple readiness levels, including raw profiled, CNC processed, primed, or fully finished, ensuring smooth integration into any production workflow.

Every aspect of the product can be customised to suit specific manufacturing or architectural requirements. This includes material, profile, dimensions, coating system and the desired level of readiness.
